

## Definition :-

weip to Access the site with internet connection and if site is band Then does not allow to connect our access with internet using proxy design pattern.

Method : disconnect

Classes :

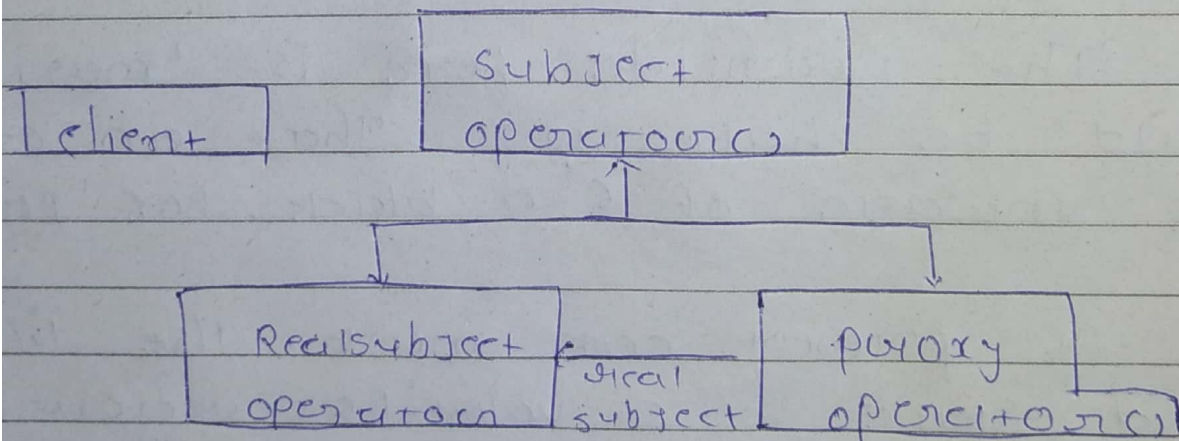

Client . java

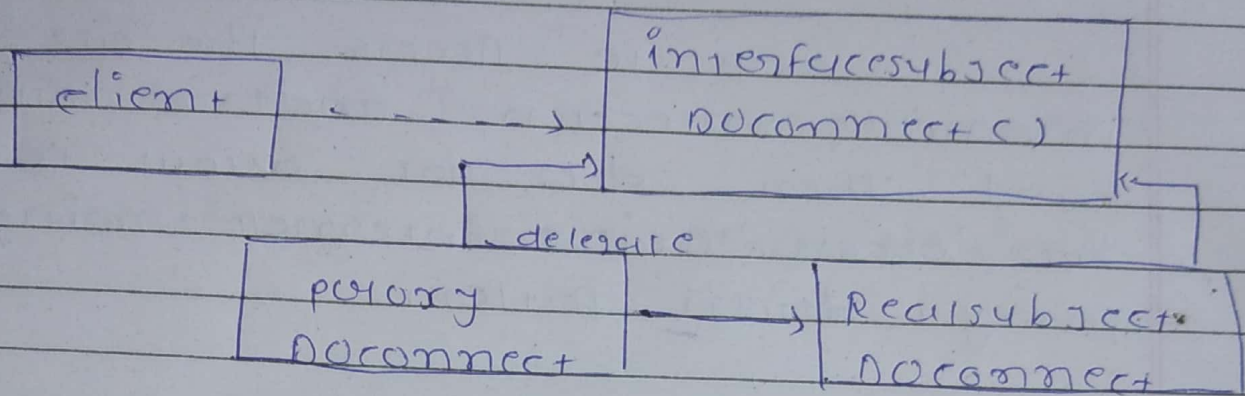

Internet . java

ProxyInternet . java

RealInternet . java

## Structure Diagram :

class diagramme :Advantages :-

- one of the advantages of proxy pattern is security

Disadvantages :

The downside here is 'magic' could be happening that an extender is unaware of C's black box 'problem'.

A proxy can mask the life-cycle and state of a volatile resource from its client
