* Facade design pattern *

- Example

  - building that has ten floours with 2-3
    rooms each. Foor a quality purpose,
    you'd need comment and buicks, etc.
    here to build the Structure you need
    to maintain many things which is
    a complex purocess.
  - you will give this task to the building
    contractor who will manage these
    things in a better manner.
    you'll play him 100000 rupees to that
    contractor, and you will explain him
    with your ideas. Then that contractor
    will handle these complicated things
    on behalf of us.
